EDUCATION

Rutgers University, New Brunswick, NJ | May 2026

Bachelor of Science | Computer Science & Data Science | **Achievements:** Dean's List (2025)

Relevant Coursework: Machine Learning, Deep Learning, Data Visualization, Data Structures & Algorithms, Intro to Artificial Intelligence

SKILLS

Programming: Python (pandas, NumPy), R, SQL, Java, JavaScript

AI & ML: Regression, Classification, Cross-Validation, LangChain, LLMs, Prompt Engineering, Neural Networks, Model Evaluation

Data Tools: Tableau, Power BI, Excel (Pivot Tables, Charts), Matplotlib, Seaborn

Web & APIs: Flask (REST APIs), HTML, CSS, JSON, Backend Integration

Databases: MySQL, PostgreSQL, MongoDB, Snowflake

Data Engineering: ETL pipelines, dbt-style SQL models, Airbyte concepts, data cleaning, data quality checks

Cloud & Deployment: AWS, Docker, Render, Heroku, Gunicorn, GitHub Actions (CI/CD), API Rate-Limiting, Session Persistence

Version Control & OS: Git, GitHub, Windows, Linux, macOS

Analytics: Descriptive, Predictive, and Prescriptive Analytics, Trend Analysis, Visualization, Business Impact Communication.

PROFESSIONAL EXPERIENCE

Data Entry & Analysis Intern | The Marcus Harris Foundation | Remote | Aug 2025 – Present

- Cleaned and validated **1,500 + records** using SQL and Excel, ensuring **Snowflake-style data quality checks**.
- Designed **interactive dashboards** for 100 + donors, improving **reporting accuracy and transparency by 25 %**.
- Built **ETL workflows** to standardize records, cutting manual reporting time by around **25 %**.
- Partnered with teams to document data models and maintain **cross-project dataset consistency**.

Fulfillment & Retail Associate | Amazon | New Jersey | May 2025 - Present

- Processed and tracked **500 + packages daily**, maintaining a **99 % accuracy rate and timely delivery**.
- Resolved customer inquiries each week with **rapid response and exceptional service ratings**.
- Streamlined packaging operations, reducing handling time by **15 % through workflow optimization**.
- Coordinated with supervisors to improve team communication and **boost overall productivity metrics**.

PROJECTS

Rutgers University Parking And Transit (RUPATH) Chatbot | Sept 2025 – Present

- Developed **AI chatbot** recommending optimal parking across **five Rutgers campuses** using **LangChain** and **Claude AI**.
- Enhanced reasoning accuracy by 35 % through **rule-based ranking and multi-turn dialogue optimization**.
- Deployed on Render Cloud with **Docker and GitHub Actions**, following modular, review-friendly development practices.
- Designed an **agentic AI pipeline** connecting structured data and LLM context, improving response speed and reliability.

Automated Data Collection & Analysis Pipeline | Aug 2025 – Sept 2025

- Built a Python-based end-to-end pipeline for data ingestion and preprocessing, supporting downstream analytics and ML-ready data.
- Built **dbt-style models** to transform raw data into **clean, LLM-ready tables and views**.
- Reduced data prep time from **10+ hours to under 2 hours** weekly through modular scripts.
- Produced validated Excel dashboards for **100 + stakeholders** with automated summaries and metrics.

Broadway Grosses Analysis & Dashboard Project | May 2025 - June 2025

- Analyzed **2,000+ Broadway show records**, identifying top-performing genres and seasonal trends across different categories.
- Built **Tableau dashboards** visualizing **ticket prices, attendance, and weekly gross revenue** patterns.
- Applied **regression analysis** to forecast weekly gross and pricing trends.
- Improved dataset accuracy by 20 % through **Python cleaning and standardization**.

Airline Reservation System Web Application | Mar 2025 - May 2025

- Engineered a **MySQL-based backend** managing **200+ flights** and **500+ users** with complete **transactional integrity** and data logs.
- Wrote over **20 SQL queries** analyzing **booking trends, customer patterns, and flight performance metrics** effectively.
- Implemented **Dockerized deployment** and GitHub Actions for CI/CD testing.
- Collaborated with a **4-member team** to design, test, and deploy a **functional full-stack reservation system prototype**.
